

Instruction sheet for the FaZuB[®] additional mirror

Thank you for buying this professional, patented driving instructor's additional mirror licensed for the EU.

I. Instruction sheet, here on the driver's side

Please follow this instruction sheet closely and point by point.

1.

Take hold of mirror at ball joint.

2.

The lower plastic mounting needs to be hooked into concentric at the lower mirror edging.

3.

Push the upper restraint system with the mirror above the upper edge of the rear view mirror of the car. The first time of installation adjust the synthetic rubber restraint system to the right length to ensure a stable hold.

www.fazub.de

4.

Tighten the textile retaining belt.

5.

Clamp the end of the textile strap under the synthetic rubber restraint system.

6.

The screw to fix the ball joint can be unscrewed with a coin to ideally justify the mirror in all directions. Then tighten again.

II. Individual adjustment

Depending on your existing rearview mirror it can be useful to change the side of the synthetic rubber belt. The textile restraining strap always remains concentric. The plug and the plug's end of the synthetic rubber belt can be turned over as well (for example plug upward  for bigger mirrors).

Depicted here are the four different options.

- III. Please remove mirror before entering a car-wash plant and clean by hand.
- IV. Spare part service is available. Check our website for details: fazub.de
- V. Only turn the mirror when the screw has been unscrewed with a coin. Thank you.
